

Synthesis and Identification of Small Compounds Active in Neurodegeneration

Guest Editors:

Dr. Barbara De Filippis

Department of Pharmacy,
University "G. D'Annunzio",
Chieti, Italy

Prof. Dr. Gunter Peter Eckert

Justus Liebig University Giessen,
Giessen, Germany

Deadline for manuscript
submissions:

closed (15 January 2023)

Message from the Guest Editors

Neurodegenerative disorders affect millions of people worldwide and are increasingly recognized as one of the most prevalent disorders. Despite substantial effort to advance the understanding of the etiology and potential treatment of neurodegeneration, information is still incomplete because many potential mechanisms are implicated in neurodegenerative pathology such as neuroinflammation and disequilibrium in protein homeostasis, toxic exposure and stress. However, very few drugs have been successful for the treatment of CNS diseases, and the therapeutic efficacy is greatly limited by many factors such as ineffective transport of drugs across the Blood-Brain Barrier (BBB). Different molecular properties are fundamental to cross the BBB, and optimization of these parameters still remains a significant challenge in the development of neurological therapeutics. The aim of this Special Issue is to spot recent advances in "Synthesis and Identification of Small Compounds Active in Neurodegeneration", highlighting recent identification of synthetic as well as small, natural-based molecules regarding the use of nanomaterials as versatile drug transport systems across BBB.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Igor Alabugin

Department of Chemistry and
Biochemistry, Florida State
University, Tallahassee, FL 32306,
USA

Message from the Editor-in-Chief

Chemistry is a broad science and in *Chemistry* we hope to showcase the excellence of this fundamental discipline. Open Access publishing allows scientists to publish their research in a way that reaches the widest possible audience. In *Chemistry* we aspire to build a genuinely transdisciplinary culture in which communication of results between scientists active in different areas and between scientists and the broader public highlights the benefits that chemistry can bring to society. We encourage papers on all aspects of chemistry ranging from astrochemistry to zoochemistry, with everything in between. We also very strongly welcome inter- and multidisciplinary papers which expand the subject beyond its present horizons. We also welcome themed issues collecting reviews and state-of-the-art papers in topical areas of chemical science.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

Reliable service: rigorous peer review and professional production.
