Message from the Guest Editors

Carbon capture, storage, and utilization (CCSU) have recently drawn attention within the research community and funding bodies. Researchers have come up with new research lines in this direction, with innovative and advanced sorbents and also with new process routes.

New sorbents have been characterized, and their performance has also been checked, with some examples of cutting-edge sorbents including MOF-based, amine-based, CaO looping, and metal-based ones. Additionally, numerous new catalysts for CO₂ thermal, electro-, and photoconversion have been developed. All these new materials can have higher performance and have an environmental impact on CCSU lifecycle assessment.

When it comes to new process routes and process integration of CCSU within different plants and industries, it is important to highlight the impact of these strategies. Optimization of operational existing conditions in pilot plants and new issues tackled in process integration has been considered for carbon capture, storage, and/or utilization. These advancements can deliver lower energy consumption and have an immediate impact on plant efficiency.

Biochemistry, Florida State
University, Tallahassee, FL 32306,
USA

Message from the Editor-in-Chief

Chemistry is a broad science and in *Chemistry* we hope to showcase the excellence of this fundamental discipline. Open Access publishing allows scientists to publish their research in a way that reaches the widest possible audience. In *Chemistry* we aspire to build a genuinely transdisciplinary culture in which communication of results between scientists active in different areas and between scientists and the broader public highlights the benefits that chemistry can bring to society. We encourage papers on all aspects of chemistry ranging from astrochemistry to zoochemistry, with everything in between. We also very strongly welcome inter- and multidisciplinary papers which expand the subject beyond its present horizons. We also welcome themed issues collecting reviews and state-of-the-art papers in topical areas of chemical science.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

Reliable service: rigorous peer review and professional production.
