Message from the Guest Editors

Biochar is a porous, carbonaceous material produced by the solvent-free pyrolysis of biomasses and it is rapidly emerging as an alternative to traditional synthetic carbon nanostructures to manufacture greener, sustainable, carbon-based materials to be used in diverse application fields. Its exploitation in sensing platforms has constantly grown in the last ten years, due to its favorable analytical performances, which were reported as comparable to those of the best traditional carbon-based materials. The fabrication and tailoring processes are constantly tuned and optimized, taking advantage of different chemical treatments and decoration procedures with metal/metal oxide nanoparticles and enzymes, aiming at further enhancing its selectivity and sensitivity.

This Special Issue aims at collecting novel studies deepening our current knowledge on biochar-derived sensing materials. We chiefly encourage the submission of original research papers and short communications.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Chemosensors is an international, scientific, open access journal on the science and technology of chemical sensors published by MDPI. All articles are released on the internet immediately following acceptance. The journal publishes reviews, regular research papers, and communications. The scope of Chemosensors includes:

New chemical sensors design

Electrochemical devices, potentiometric sensor, redox electrode

Optical chemical sensors

Analytical methods

Environmental monitoring

Gas detectors

electronic nose, etc.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPus / SciFinder](#), [Inspec](#), and [other databases](#).

Journal Rank: JCR - Q1 (*Instruments & Instrumentation*) / CiteScore - Q2 (*Analytical Chemistry*)
