

Special Issue

Advances in Magnetic Sensors with Nanocomponents

Message from the Guest Editors

Magnetic sensors have attracted scientific attention for their technological findings in a broad scope of fields. These applications range from space research to security systems, high-density magnetic recording, environmental monitoring, and biomedicine. The miniaturization of sensors and technological devices is a pillar of the development in smart-novel nanomaterials that challenges the materials science community. The current tendencies in sensors require high sensitivity, a quick response, small size, and stability, while reducing the production cost and power consumption. Recent trends in sensors are based on basic research combining both chemical and physical principles. One of the assets relies on the possibility of integrating different nanosensors in a compact device. This Special Issue of *Chemosensors* will be focused on the latest advances and novel ideas that are devoted to designing magnetic devices and applications, magnetic sensing technology, chemical detection systems, basic phenomena, and fundamental studies of new nanomaterials suitable for the next generation of sensors. Short communications, research papers, and review articles are welcome.

About the Journal

Message from the Editorial Board

Chemosensors continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

Editors-in-Chief

Prof. Dr. Jin-Ming Lin

Department of Chemistry, Beijing Key Laboratory of Microanalytical Methods and Instrumentation, Tsinghua University, Beijing 100084, China

Prof. Dr. Nicole Jaffrezic-Renault

Institute of UTINAM, UMR-CNRS 6213, University of Franche-Comté, 16 Gray Road, 25030 Besançon, France

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Engineering Village and other databases.

Journal Rank:

JCR - Q1 (Instruments and Instrumentation) / CiteScore - Q2 (Analytical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2024).
