Message from the Guest Editors

Dear Colleagues,

Children are susceptible to bacterial, mycotic, and viral infections in the orofacial area that primarily affect the mucous membranes, dental tissues, and periodontal structures or are secondary manifestations of systemic infectious diseases.

Mucosal infections, especially mycotic ones such as thrush, and viral ones, including herpes simplex and zoster, herpangina, hand-foot-and-mouth disease, and HPV-related lesions, are common clinical findings.

Nonetheless, similar to adults, most orofacial infections in the pediatric population are bacterial in origin. Among these, the most commonly diagnosed are odontogenic infections, including dental caries and associated complications (i.e., pulp necrosis, apical periodontitis, and periapical abscesses). The necrotizing form of periodontal disease and the pathological condition formerly known as juvenile periodontitis are also found in children and adolescents, as is pericoronitis.

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [Embase](#), and [other databases](#).

Journal Rank: JCR - Q2 (Pediatrics) / CiteScore - Q2 (Pediatrics, Perinatology and Child Health)
