### Message from the Guest Editors

Various forms of adverse childhood experiences (ACEs, e.g., disrupted family function, household financial strains, bullying victimization, maltreatment, and trauma) may have a negative impact on the physical health, mental wellbeing, and behavioral and social development of children and adolescents. However, individuals' characteristics along with social resources and protective factors can help develop resilience and the ability to thrive, despite exposure to ACEs.

Considering the success and popularity of the Special Issue "Research on Childhood Adversity and Youth Resilience: Cross-Disciplinary Perspectives" previously published in the journal *Children* ([https://www.mdpi.com/journal/children/special\\_issues/Childhood](https://www.mdpi.com/journal/children/special_issues/Childhood)) we are now releasing a second issue which aims to collect and share the most recent research advancements in adverse childhood experiences. In this Special Issue of *Children*, senior investigators are welcome to invite mentees and colleagues to co-author submissions under their supervision. We look forward to receiving your contributions.
