Research Progress in Pediatric Lymphoma

Message from the Guest Editor

Lymphoma is a type of cancer derived from lymphocytes. It is the third most common cancer in children. Its prevalence rate is only below that of acute leukemia and brain tumors, accounting for about 9% of pediatric cancers. Lymphoma is characterized by uncontrolled proliferation of immature or abnormal lymphocytes that destroy normally constructed lymph nodes or the structures of other human organs, forming a mass lesion with the dysfunction of the involved organs. Despite numerous research breakthroughs in the biology, diagnosis, and therapy of pediatric lymphoma that have been achieved in the past decades, it remains one of the leading causes of cancer mortality in children. Much more research is required to further improve the outcomes of pediatric lymphoma. This Special Issue aims to improve the understanding and treatment of lymphoma through innovation, and collaborate with other clinical specialties and basic scientists to promote multi-disciplinary methods of studying pediatric lymphoma. Clinicians and scientists are encouraged to share their cases and discoveries to provide the latest progress in the diagnosis and treatment of pediatric lymphoma.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
