Biomass-Based Green Technologies for Modern Bioeconomy

Guest Editors:

Prof. Dr. Qiang Li
1. College of Engineering, Huazhong Agricultural University, Wuhan 430070, China
2. College of Horticulture and Forestry Science, Huazhong Agricultural University, Wuhan 430070, China

Prof. Dr. Rendang Yang
State Key Laboratory of Pulp and Paper Engineering, South China University of Technology, Guangzhou 510641, China

Deadline for manuscript submissions:
closed (20 October 2023)

Message from the Guest Editors

Current biomass-related technologies include feedstock design, biorefining, manufacturing, waste handling, waste valorization, etc., which have generated green and sustainable products of bio-energies, biofuels, chemicals, biomaterials, and multifunctional devices. Meanwhile, the field still faces challenges in implementing biorefinery and industrializing these bioproducts because of the difficulties in reaching product quality, cost-effectiveness, processing optimization, and net carbon footprint. In this Special Issue, we aim to collect recent advancements in green technologies that use biomass as the feedstock to achieve a modern bioeconomy. The covered topics include:

- biomass feedstock design and development
- biofuels and bioenergy
- biomass-derived advanced multifunctional materials and devices
- biomass-derived nanomaterials like nanocellulose and nanolignin
- cellulose, hemicellulose, and lignin-derived chemicals and products
- biomass-derived plastic alternatives
- technology, processing, devices, and equipment developments for efficient biomass conversion
- life cycle, economic, and sustainability assessment of biomass-derived products

Message from the Editor-in-Chief

Clean Technologies (ISSN 2571-8797) is an international, open access journal of novel scientific research on technology development aimed at reducing the environmental impact of human activities. *Clean Technologies* publishes reviews, regular research papers, communications and short notes which show a significant advance in the development of sustainable technology that reduces energy consumption, environmental pollution and/or the use of water and nonrenewable resources. Our aim is to encourage scientists to publish their experimental and theoretical research in detail as open access, serving a trustable base of advance for the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, AGRIS, RePEc, and other databases.
Journal Rank: JCR - Q2 (*Engineering, Environmental*) / CiteScore - Q1 (Environmental Science (miscellaneous))
