Message from the Guest Editors

Dear Colleagues,

The ocean exchanges heat by absorbing solar radiation and releasing it into the atmosphere, moisture through evaporation and condensation of water vapor, and carbon dioxide through air-sea interactions with the atmosphere, causing a significant influence on continental and coastal climates, for both short-term and long-term periods.

This SI will be focused on both short-term and long-term climate changes, involving heat transport and ocean circulation impacts on continental and coastal climates, variability of temperature ranges in continental, coastal, and ocean processes on intra- and inter-annual time scales, sea level rise and coastal erosion, biological pumps in the ocean impacting carbon dioxide concentrations in the atmosphere, severe flood and draught, El Nino, the unusual paths of tropical cyclones, as well as their development and decay in coastal and open seas. However, there are also no limitations in regards to processes applied in the above-mentioned subject areas.

Prof. Dr. Hyo Choi
Dr. Milton S. Speer

Message from the Editor-in-Chief

Climate (ISSN 2225-1154) was established in 2013 to provide an open-access outlet for innovative research, review articles, new direction papers, and short communications relevant to all disciplines related to climate at all scales. The journal encourages papers ranging from climate change detection and attribution and Earth system modeling to ecosystem, hydrologic, and socioeconomic impacts and climate mitigation and adaptation measures. The influence of *Climate* is strong and growing (IF 3.2 in 2024, CiteScore 5.7 in 2024).

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), GEOBASE, GeoRef, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Meteorology and Atmospheric Sciences) / CiteScore - Q2 (Atmospheric Science)
