Message from the Guest Editor

Dear Colleagues,

The Special Issue will cover a wide range of topics related to dental surgery, including the latest techniques and technologies used in dental procedures, such as dental implants, orthodontic treatments, and oral and maxillofacial surgery. It also discusses the potential future options for dental surgery, including regenerative medicine, stem cell therapy, and precision dentistry. The articles in this Special Issue will present the latest research findings, case studies, and clinical trials related to dental surgery. They will explore the effectiveness of various treatment approaches, their impact on patient outcomes, and the potential complications and risks associated with these procedures. Overall, this Special Issue will provide valuable insights into the current state of dental surgery and will highlight the future directions and potential advancements in this area of the dental field. It is a valuable resource for dental professionals, researchers, and anyone interested in staying up to date with the latest advancements in dental surgery.
