# Advances in Thin Film Magnetism

Guest Editor:

**Prof. Viorel Sandu**
Department of Magnetism and Superconductivity, National Institute of Materials Physics, 405a Atomistilor Str., Magurele, J.Ilfov, Romania

Deadline for manuscript submissions:
**closed (30 November 2021)**

## Message from the Guest Editor

Magnetism in thin films is a fascinating field in which the restricted size, importance of the surface, and presence of a structurally and compositionally different substrate generate a rich variety of phenomena that no longer respect the thermodynamic limits established in bulk systems. The typical physical quantities, such as exchange interaction and magnetic anisotropy, are seriously changed by the confinement between surface and interface, and frustration and interaction with foreign orbitals. The possibility to go beyond frontiers by accurately controlling the size, interface quality, and composition, which was facilitated by the technological progress of film deposition, has led to an unprecedented development of new materials with outstanding magnetic properties. Moreover, new architectures as well as new materials (i.e., magnetic topologic insulators) opened the road for magnetization manipulation through electric field or charge current (spin transfer and spin orbit torque). New technological applications promptly emerged trying to satisfy the high demand for sensitive sensors, for ultrafast, nonvolatile, and scalable memories and logic application.

## Editors-in-Chief

**Prof. Dr. Wei Pan**
State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

**Dr. Emerson Coy**
NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

## Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.
**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.
**Journal Rank:** JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Surfaces, Coatings and Films*)
