High Entropy Alloy Films

Guest Editor:

Prof. Dr. Chun-Hway Hsueh

Department of Materials Science and Engineering, National Taiwan University, Taipei 10617, Taiwan

Deadline for manuscript submissions:

5 January 2025

Message from the Guest Editor

Dear Colleagues,

In recent years, a counterpart of the HEA, the HEA film (HEAF), has been developed. Different technologies have been adopted to fabricate HEAFs, including sputtering, electrodeposition, spraying, laser cladding, and plasmatransferred arc cladding, etc. Compared to HEAs, HEAFs possess different structures and properties. Experimental results have also shown the excellent mechanical and physical properties of HEAFs.

This Special Issue, entitled "High Entropy Alloy Films" addresses the current understandings, new development, and challenges in a wide range of topics on HEAFs. The aim of this Special Issue is to provide a platform to bring together high-quality research and innovative ideas, and to bridge the gap between the fundamental research and applications for HEAFs. In particular, the topics of interest include, but are not limited to:

- Thin film technologies
- Composition design
- Structures and properties
- Hardening and strengthening
- Modeling
- Applications

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Surfaces, Coatings and Films*)
