Deadline for manuscript
submissions:

10 June 2024

Message from the Guest Editors

Dear Colleagues,

Laser assisted surface technology (LAST, including coatings and modification) plays an important role in the surface engineering fields. Many studies have been carried out to develop advanced technologies and new functional materials. This Special Issue will focus on the cross combination of multi-technology, multi-mechanism, and multi-methods of LAST to improve the surface properties, including the principal scheme and technology, which cannot be solved by the single technology in the laser material processing field and other surface engineering fields, the design and optimization of the process system, as well as the physical process and interfacial microstructure transition mechanism of different laser-assisted surface technologies in improving surface properties. Additive manufacturing (AM), laser surface cladding (LSC), laser chemical vapor deposition (LCVD), laser surface alloying (LSA), laser-assisted plasma spraying (LPS), pulsed laser deposition (PLD), laser surface micro/nano structure preparation and other laser-assisted surface technologies are all of interest.

We look forward to receiving your contributions.

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
