Deadline for manuscript  
submissions:

**closed (30 April 2022)**

### Message from the Guest Editor

The importance of carbon as a mechanical-tribological protective layer on sliding components and tools has constantly increased over the past several decades. The combination of wear protection and friction reduction even under critical lubrication situations makes carbon coatings unique. Diamond-like carbon (DLC) coatings have become indispensable in more and more applications. Based on the coating technologies PACVD, magnetron sputtering, pulsed or DC-arc, and HiPIMS, various types of amorphous hydrogen-containing and hydrogen-free, doped and undoped carbon coatings have been developed. From the beginning, insufficient adhesion, relatively high brittleness, and high residual compressive stresses have been the unwanted companions of the coating development. Adaptions of coating design by structural modification or doping lead to increasingly resilient coating systems to meet the mechanical and tribological requirements in practice. A particular goal of current coating development is to achieve low friction—even superlubricity—in combination with specific lubricants.

## Editors-in-Chief

### Prof. Dr. Wei Pan

State Key Laboratory of New  
Ceramics and Fine Processing,  
School of Materials Science &  
Engineering, Tsinghua University,  
Beijing 100084, China

### Dr. Emerson Coy

NanoBioMedical Centre, Adam  
Mickiewicz University in Poznań,  
ul. Wszechnicy Piastowskiej 3, 61-  
614 Poznań, Poland

## Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Surfaces, Coatings and Films*)
