Message from the Guest Editors

Dear Colleagues,

This Special Issue aims to report on recent advances in the application of various nanomaterials in energy and environmental applications. For the energy applications, the structure design of the energy devices is essential, including the deposition of electrodes and the process of electrolytes for batteries, the coating of friction materials for nanogenerators, and the dielectric layer for capacitors. For environmental applications, the design of nanostructures that are either recyclable or transient in circuit, or capable of serving as CO₂ reduction catalysts, is highly welcome.

The topics of particular interest include, but are not limited to:

- Synthesis, characterization and performance of 1D and 2D nanomaterials.
- High-performance photocatalysts for hydrogen production and CO₂ reduction.
- Structures and recycling processes for transient electronics.
- Design and sintering techniques of conductors for solar cells and capacitors.
- Processing of solid-state electrolytes for lithium batteries.
- Structure design and property measurement of nanogenerators.

Deadline for manuscript
submissions:

10 June 2024

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
