

Advanced Coatings for Bio-Applications–Antibacterial Surfaces

Guest Editors:

Dr. Agnieszka Kyzioł

Faculty of Chemistry,
Jagiellonian University, 30-387
Kraków, Poland

Dr. Karol Kyzioł

Faculty of Materials Science and
Ceramics, AGH University of
Science and Technology, 30-059
Kraków, Poland

Deadline for manuscript
submissions:

closed (30 June 2020)

Message from the Guest Editors

Bacterial infections, in particular those derived from random contaminations and connected with the implantation of medical devices, continue to be a major problem at present and account for an increasing number of deaths. Moreover, tackling skin and soft tissue infections, including chronic wounds, especially caused by methicillin-resistant strains of *Staphylococcus aureus* (MRSA) and antibiotic-resistant *Pseudomonas aeruginosa*, is still a challenge for today's developed medicine. The dramatically increasing bacteria resistance has been recognized as one of the greatest health threats of the beginning of the 21st century.

Thus, the development of antimicrobial resistance, mainly caused by the overuse of antibiotics, their high target specificity, and development of difficult-to-remove biofilm, force us to look for alternatives to tackle life-threatening infections initiated mainly by antibiotic-resistant bacteria. In view of these, we invite you to present your valuable research focused on innovative functional bioactive coatings to prevent biofilm-forming antibiotic-resistant bacterial infections in this Special Issue.

Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Surfaces, Coatings and Films*)
