Deadline for manuscript  
submissions:

**closed (10 June 2024)**

### Message from the Guest Editor

Dear Colleagues,

Flexible electronics have emerged as a brand new form to compensate for or even replace traditional rigid-materials-based electronic devices. There are a variety of categories of flexible devices, such as flexible electrodes, sensors, batteries, supercapacitors, and solar cells. In principle, two strategies are employed to construct flexible electrical devices, including material innovation and structural design. In particular, functional nanomaterials are considered as indispensable parts of flexible electronics. The past decade has witnessed the development of various functional nanomaterials, mainly including nanoparticles, nanowires, nanosheets, and nanoporous materials.

The purpose of this issue is to present the latest research progress on nanomaterials for flexible electronics as well as research trends and application prospects:

- Nanoparticles on flexible electronics;
- Nanowires on flexible electronics;
- Nanosheets on flexible electronics;
- Nanoporous on flexible electronics;
- Hydrogels on flexible electronics;
- Liquid metal on flexible electronics;
- Polymers on flexible electronics;
- Composites on flexible electronics ;
- Wearable electronics.

## Editors-in-Chief

### Prof. Dr. Wei Pan

State Key Laboratory of New  
Ceramics and Fine Processing,  
School of Materials Science &  
Engineering, Tsinghua University,  
Beijing 100084, China

### Dr. Emerson Coy

NanoBioMedical Centre, Adam  
Mickiewicz University in Poznań,  
ul. Wszechnicy Piastowskiej 3, 61-  
614 Poznań, Poland

## Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Surfaces, Coatings and Films*)
