

## Nanocoatings with Air-Purifying Properties

Guest Editors:

**Prof. Dr. Anibal Maury-Ramirez**

Architecture Department, Faculty of Design Sciences, University of Antwerp, 2000 Antwerp, Belgium

**Dr. Placidus B. Amama**

Department of Chemical Engineering, Kansas State University, Manhattan, KS 66506, USA

Deadline for manuscript submissions:

**closed (31 December 2019)**

### Message from the Guest Editors

Dear Colleagues,

Air pollution is a major concern on global and local scales. As concluded almost ten years ago in the Blacksmith Institute's "World's Worst Pollution Problems 2008", indoor air pollution and poor urban air quality are listed as two of the world's worst pollution problems. In addition to destroying diverse ecosystems due to global warming, air pollution causes serious respiratory and cardiovascular problems in human beings. On the other hand, in spite of the applied efforts to reduce air pollution by improving manufacturing processes, stimulating more sustainable transportation methods, installing emission reduction systems in vehicles, air pollution is still a major problem at global and local scales. Thus, innovative solutions such as nanocoatings are needed to tackle this current human challenge. For example, photocatalytic coatings has become an appealing approach as a green technology for air purification. This Special Issue aims to provide comparisons and assessments of the application potentials of novel nanocoatings for indoor and outdoor air purification.

## Editors-in-Chief

### Prof. Dr. Wei Pan

State Key Laboratory of New  
Ceramics and Fine Processing,  
School of Materials Science &  
Engineering, Tsinghua University,  
Beijing 100084, China

### Dr. Emerson Coy

NanoBioMedical Centre, Adam  
Mickiewicz University in Poznań,  
ul. Wszechnicy Piastowskiej 3, 61-  
614 Poznań, Poland

## Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Physics, Applied) / CiteScore - Q2 (Surfaces, Coatings and Films)
