

## Tribological Studies on Diamond, DLC and Ta-C Coatings

Guest Editor:

**Dr. Vitali Podgursky**

Department of Mechanical and Industrial Engineering, School of Engineering, Tallinn University of Technology, Tallinn 19086, Estonia

Deadline for manuscript submissions:

**closed (31 January 2022)**

### Message from the Guest Editor

Dear Colleagues,

Due to their outstanding properties, carbon-based materials have found many applications in different branches of industry and continue to attract much interest in the scientific community. The variety of structures of carbon-based coatings calls for broader investigation, which will ultimately be beneficial, enabling a deeper understanding of their excellent tribological properties, including superlubricity. This Special Issue aims to bring together investigations on diamond, DLC and ta-C coatings with a focus on the understanding of the wear and friction mechanisms under different experimental conditions. Dangling bond passivation, graphitization, formation of self-generated transfer layer, etc., are the mechanisms under consideration. Experimental investigations, simulations and modeling (thermodynamic, first principles, etc.) of the tribological properties on the diamond, DLC and ta-C coatings, as well as comparative studies involved in these coatings, are welcome.

## Editors-in-Chief

### Prof. Dr. Wei Pan

State Key Laboratory of New  
Ceramics and Fine Processing,  
School of Materials Science &  
Engineering, Tsinghua University,  
Beijing 100084, China

### Dr. Emerson Coy

NanoBioMedical Centre, Adam  
Mickiewicz University in Poznań,  
ul. Wszechnicy Piastowskiej 3, 61-  
614 Poznań, Poland

## Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Physics, Applied) / CiteScore - Q2 (Surfaces, Coatings and Films)
