Message from the Guest Editors

In the past hundred years, the alloy solidification and crystallization process has changed from a type of ancient metallurgical technology into an important branch of modern science. The solidification of metals not only determines the structure and properties of metals and alloys, but also affects the subsequent plastic processing and heat treatment. In addition, alloy solidification simulation calculation can accurately predict the formation of crystals or defects, and then guide production practice. Therefore, the study of alloy solidification and simulation has guiding significance for the application and development of metal materials. To this end, we have organized this Special Issue entitled “Solidification/crystallization behavior of alloys and related simulation calculation”.

Deadline for manuscript submissions:

closed (31 December 2023)

of Pisa, 56126 Pisa, Italy

Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Crystallography*) / CiteScore - Q2 (*Condensed Matter Physics*)
