### Message from the Guest Editors

Dear Colleagues,

Multiferroic materials, which have two or more ferroic orders, such as ferroelectricity, ferromagnetism, and ferroelasticity, have gained more interest in the world of novel multifunctional materials due to the interaction between spin and charge. The magnetolectric (ME) effect is the coupling between polarization (P) and magnetization (M).

With the development of nanoscience, magnetolectric materials based on metals, oxides, semiconductors and their combinations have attracted more research attention. Developing novel magnetolectric materials has become the focus of research fields, including the development of materials, sensors, and biomedical applications. It is still necessary to be solved for practical applications are performance improvement, in-depth understanding of the physical and chemical properties.

This Special Issue will discuss the directions of magnetolectric materials development focusing on design, synthesis, characterization, theoretical description, recent developments in single-phase, composite form and their applications.

## Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Crystallography*) / CiteScore - Q2 (*Condensed Matter Physics*)
