

## Laser-Induced Crystallization

Guest Editors:

**Prof. Dr. Bertrand Poumellec**

Institut de Chimie Moléculaire et,  
des Matériaux d'Orsay, Université  
Paris-Saclay, bât.410, 91405  
Orsay, France

**Prof. Dr. Vladimir Sigaev**

Mendeleev University of  
Chemical Technology,  
Department of Glass and Glass-  
Ceramics, Miusskaya pl. 9, 125047  
Moscow, Russia

Deadline for manuscript  
submissions:

**closed (28 February 2021)**

### Message from the Guest Editors

The laser is a formidable tool for materials science. Lasers are monochromatic and can have a large intensity that can be focused at the ultimate limit, thus making them especially suited to direct laser writing. Furthermore, the femtosecond laser (a laser with pulses of ten to hundreds of  $10^{-15}$  s) is a new laser that became possible thanks to the invention of amplification by Prof. Gérard Mourou and Donna Strickland (Nobel Prize 2018) Its pulses are so energetic that it is possible to interact with any material, even those that are transparent, such as window glass. The possibilities for lasers in materials science are numerous. Some are already in use in industries for surface machining and shaping materials. Others are well on the way to being used for designing at the micron-scale refractive index (optical waveguides) and birefringence in transparent glasses, while other properties are also being studied. This opens new possibilities in integrated or free optics, rendering possible new applications towards the elaboration of optical devices by optics for optical use and for a safe future.

an Open Access Journal by MDPI

of Pisa, 56126 Pisa, Italy

## Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Crystallography*) / CiteScore - Q2 (*Condensed Matter Physics*)
