Deadline for manuscript
submissions:

closed (15 September 2023)

Message from the Guest Editors

ABX₃-based perovskites have potential applications in photovoltaics and optoelectronics due to their unique photoelectric properties, such as high absorption coefficient, long carrier diffusion length, unusually high defect tolerance, and adjustable band gap. Perovskites can be divided into organic and inorganic metal halides according to their chemical compositions and have great application potential in various fields such as solar cells, light-emitting diodes, detectors, and laser devices. Simultaneous improvements in performance and stability over the past few decades, as well as the availability of solution-printed laminated structures, have seen these materials emerge as low-cost alternatives to the commercial photovoltaic industry. The purpose of this Special Issue is to collect the latest research progress and results of perovskites, ranging from the basic theory, synthesis methods, and structural design, to their extensive applications, as well as the possibility of the widespread use of perovskites in future applications. We invite scientists from different disciplines to contribute their work to this cause.

Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [CAPus](#) / [SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Crystallography*) / CiteScore - Q2 (*Condensed Matter Physics*)
