Dear Colleagues,

This Special Issue will bring together peer-reviewed articles and reviews discussing state of the art fundamental carbon nanostructures: nanodiamonds, fullerenes, nanotubes, nanorods, nanooxions, *etc.*, as well as their syntheses, characterization, and applications. Especially appreciated are contributions discussing carbon phase diagrams at the nanoscale and theoretical and experimental studies concerning the relative stability of different forms of carbon at the nanoscale.

Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.
