Message from the Guest Editor

This Special Issue is then aimed at providing a stimulating and up-to-date outlook on Charge transfer (CT) crystals' research. Scientists working in a wide range of disciplines are invited to contribute with original papers or short reviews on their activity in the field, following the lines suggested by (but not limited to) the following keywords:

- Crystal engineering
- Crystal growth techniques
- Phase transitions
- New electron-donor or acceptor molecules
- Polymorphism
- Organic semiconductors
- Organic metals
- Organic ferroelectric and multiferroic
- Light emission properties
- Theoretical modeling and computational methods

Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.
