Message from the Guest Editors

Dr. Guangjie Feng Dear Colleagues,

Steel is a traditional and important structural material. It is applied widely in many fields, such as the automotive industry, building industry, and petrochemical industry. Although many new materials have been emerging all the time, steel is still irreplaceable in many specific conditions. After decades of development, there are different kinds of steel, such as low-carbon steel, stainless steel, highstrength steel, ultra-high-strength steel, weathering wear-resistant resistant steel. steel. etc. The microstructures and properties of steels are highly influenced by the chemical composition and formation process. For different steels, the phase transformation, the control of grains, textures and twins, the formation processes as well as their influencing mechanism on the microstructure and properties are different and are still the main issues that need to be addressed.

This Special Issue aims to bring together state-of-the-art research achievements, including but not limited to the formation and properties of steels, and help researchers around the world better follow the newest research progress and further promote the development of steels.

Deadline for manuscript submissions: closed (30 June 2023)

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases. **Journal Rank:** JCR - Q2 (*Crystallography*) / CiteScore - Q2 (*Condensed Matter Physics*)
