Message from the Guest Editor

Dear Colleagues,

Photobiomodulation (PBM), also known as low-level laser therapy (LLLT), was developed by Endre Mester (Hungary) in 1967. It has been reported that this treatment method is not invasive. Effects such as pain relief and the promotion of wound healing can be seen not only in the medical field, but also in the dental field.

However, its mechanism as to why such an effect can be brought remains unknown. In recent years, research at a cell biological level has advanced, and the mechanism is becoming apparent.

This Special Issue is interested in studies about photobiomodulation or LLLT in dentistry. The editorial board invites authors to submit manuscripts with current interest of basic or clinical contents.

Message from the Editor-in-Chief

The *Dentistry Journal* (ISSN 2304-6767) is an official, peer-reviewed publication of MDPI, which transmits original papers as well as review articles from the entire field of dentistry to the scientific community. The *Dentistry Journal* supports scientific innovations, and clinical and experimental research within the whole field of dentistry and its related areas. The *Dentistry Journal* in particular supports interdisciplinary and translational studies. The *Dentistry Journal* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, ESCI (Web of Science), PubMed, PMC,** and **other databases.**

Journal Rank: JCR - Q1 (Dentistry, Oral Surgery and Medicine) / CiteScore - Q2 (General Dentistry)
