submissions:

**20 June 2024**

### Message from the Guest Editor

Dear Colleagues,

Dental implants have been proven to be safe and predictable devices to restore edentulous areas.

Recently, the focus of scientific research has shifted to surgical and prosthetic factors capable of maintaining osseointegration over time, to factors capable of reducing bone resorption, and to the prevention of peri-implantitis.

This Special Issue is interested in all aspects of dental implantology dealing with this topic.

Dr. Paolo Pesce
