Message from the Guest Editors

Dear Colleagues,

This Special Issue will cover a wide range of topics: various regenerative approaches including biomimetic materials, bioactive molecules, and stem cell-based therapy that have been explored, as well as the aspects that have now been deployed in routine clinical practice, including guided tissue regeneration and bone augmentation in periodontal surgery and implantology, and regenerative endodontics for pulpal revascularization.

We invite authors to contribute original research or comprehensive review articles highlighting novel regenerative approaches in dental sciences.
