### Message from the Guest Editor

The field of endocrine pathology is wide and endocrine tumors represent a heterogeneous set of neoplasms characterized by a high degree of complexity. They may arise in the thyroid, parathyroid, pituitary, adrenal gland, pancreas, intestine, lung, etc. Recent breakthroughs in the molecular biology of endocrine tumors have been essential to the understanding of these neoplasms, and new classifications that take into account molecular parameters have been introduced. The aim of this Special Issue is to provide an overview of recent developments in the field of endocrine pathology and in understanding the biology and molecular oncology of endocrine and neuroendocrine tumors and their impact on diagnosis, prognosis, and therapy. Contributions on all aspects of endocrine tumours in the form of original research articles, concise reviews, or shorter perspective articles are particularly welcome. Articles with mechanistic and functional insights from a cellular and molecular biological perspective are especially appreciated.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
