Message from the Guest Editor

Dear Colleagues,

Ultrasound (US) is a standard approach for the initial evaluation of fetal anatomy and maternal conditions during pregnancy, allowing for a real-time examination, and is widely available and cost-effective.

In recent years, magnetic resonance (MR) has become a useful element in the decision-making process for fetal abnormalities and maternal diseases in pregnancy, proving to offer unequivocal advantages over ultrasound.

The primary goals of this Special Issue are to describe the state-of-the-art imaging techniques for pregnant patients presenting with fetal or maternal diseases, discuss the morphological and functional information provided by US and MR that is useful in management and guiding therapy, and present new research developments in the field of prenatal imaging.

Dr. Gabriele Masselli

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
