Message from the Guest Editor

Dear Colleagues,

The Special Issue entitled “Risk Factors for Frailty in Older Adults” explores the various factors that contribute to the onset and progression of frailty among older populations. Frailty is a multidimensional syndrome characterized by decreased strength, endurance, and physiological function, which increases vulnerability to adverse health outcomes. This depends on both intrinsic and extrinsic risk factors such as genetic predispositions, chronic diseases, nutritional deficiencies, physical inactivity, and social determinants such as isolation and socioeconomic status. Therefore, this Special Issue aims to improve understanding and provide insights to develop preventive measures and interventions to mitigate frailty, thereby improving the quality of life and health outcomes of older adults.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
