Message from the Guest Editor

Dear Colleagues,

Sudden cardiac death is a relevant problem, affecting populations of all ages, including the young, and in 50% of cases, it may be the first manifestation of the disease. The latest scientific evidence emphasizes the importance of multiparametric and multidisciplinary evaluation in the arrhythmic risk stratification of the patient with cardiomyopathy, highlighting the increasingly important role of cardiac magnetic resonance imaging and genetics. However, many patients are still in a gray area for whom it can be difficult to make the right decision.

The purpose of this Special Issue is to collect your experiences and ideas on “arrhythmic risk stratification,” in particular “Risk and Prediction of Sudden Cardiac Death and Arrhythmias,” of patients with cardiomyopathy in reviews and clinical research articles, so that we can discuss this topic, which still raises many open questions, with the aim of improving the management of our patients.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
