Message from the Guest Editor

Acute myocardial infarction (AMI) is one of the leading causes of morbidity and mortality in the developed world with a prevalence of approximately three million people worldwide despite substantial improvements in prognosis over the past decade. This improvement is a result of several major trends, including risk stratification, the use of early invasive strategy through percutaneous coronary intervention (PCI), the use of mechanical support devices in cardiogenic shock complicating AMI, better antiplatelet agents and anticoagulants, and better knowledge about the importance of secondary prevention strategies (such as statins).

This Special Issue aims to provide a comprehensive picture on this dynamic research area by gathering contributions that cover all aspects related to the topic, including the diagnosis and management of AMI; cardiogenic shock complicating AMI; and short- and long-term prognosis of AMI.

Contributions may be related to any aspect of AMI and should expand on the knowledge surrounding such topics.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
