### Message from the Guest Editors

Colorectal cancer (CRC) is the third most common cancer with 1.8 million new cases diagnosed and 81,000 deaths associated with the disease in 2018. In this special issue, we update the new approaches for the screening and diagnosis of CRC including primary and metastatic disease, as well as recurrent disease.

Main topics are liquid biopsy, microbiome, and other non-invasive strategies. The latest advances in routine management for diagnosis, endoscopic and/or radiological findings are welcome. Diagnostic tactics for hereditary CRC forms or IBD-associated CRC are also invited.
