Message from the Guest Editor

Fecal immunochemical tests are the most widely used colorectal cancer diagnostic biomarker. There is ample evidence on the use of this biomarker as a colorectal cancer screening test. However, in recent years, multiple research has been published regarding their use in the colorectal cancer diagnosis as well as in alternative settings: surveillance after adenoma resection. The aim of this Special Issue is to explore the advantages and limitations of fecal immunochemical tests in the diagnosis and prevention of colorectal cancer. We will also accept articles regarding other issues, such as colorectal cancer risk stratification using fecal immunochemical tests, concomitant use with other biomarkers, or comparison of fecal immunochemical tests with other available biomarkers.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
