Message from the Guest Editor

Dear Colleagues,

Fetal growth restriction (FGR) can be caused by a wide variety of factors, including placental insufficiency, infection, chromosomal abnormalities, genetic predisposition, and metabolic abnormalities. Prenatal diagnostic tools include ultrasonography, serological tests, and chorionic and amniotic fluid tests. Ethical considerations must also be taken into account, such as when and how to provide explanations to the family. Determining the timing and mode of delivery, and on what basis, represents an even greater challenge. We invite papers on this topic from a wide range of perspectives, including long-term prognostic studies and treatment strategies.

Prof. Dr. Daisuke Tachibana

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
