Message from the Guest Editors

The vast majority of cases of sudden death are attributable to events with cardiac etiology, such as fatal arrhythmias, acute myocardial infarction, cardiomyopathies, although acute fatal events with neurogenic or respiratory etiology are also possible. Diagnosing and preventing sudden deaths is certainly a major challenge, both for the clinician and for the pathologist. On the patient, clinical cases can be varied, with very different clinical presentations or often overlooked family histories for these events. On cadavers, on the other hand, the literature estimates that a significant proportion of sudden deaths, which can be estimated at around 1/3 of the cases, do not show diriment signs at post-mortem examination or show findings only suggestive of sudden death with no macroscopic or microscopic pathognomonic evidence. This invalidates the correct diagnosis of these events, making it difficult to identify them even in the post-mortem. The purpose of this Special Issue is to deepen research in the field of diagnostics and prevention of sudden deaths both in the patient and cadaver through the introduction of new research approaches.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
