Message from the Guest Editor

Myelodysplastic syndromes are one of the most frequent hematological malignancies, especially in the elderly population. Differential diagnoses in the case of one or several cytopenias are routinely investigated in hematology laboratories. These diagnoses rely first and foremost on the optical microscope (blood and bone marrow smears) and require expertise as some differential diagnosis can be challenging. Of course, the definition of a myelodysplastic syndrome has evolved over time and has also included the karyotype for more than ten years.

In this Special Issue, we will review methods for the diagnosis of myelodysplastic syndromes, focusing on recent advances. Much emphasis will be put on the clinical usefulness in terms of prognostic and theragnostic implications and on the current recommendations from different societies and groups. Original, review, and guidance/guidelines papers are welcome.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
