Message from the Guest Editor

Echocardiography is a well-established and indispensable imaging modality that plays a pivotal role in the evaluation of patients with known or suspected heart disease. Recent technological advancements in echocardiography have allowed the development of new methods that can improve clinical cardiovascular diagnosis and prognosis. The new generation of software and hardware has led to the availability of new echocardiographic techniques for more accurate quantification of volumes, function, myocardial mechanics, and hemodynamic assessment, including transthoracic echocardiogram in adults and fetuses, transesophageal echocardiogram, two-dimensional and three-dimensional speckle tracking echocardiography, real-time–three-dimensional echocardiography, and vector flow mapping. With the rapid growth of complex clinical echocardiography data, artificial intelligence and machine learning came into existence.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
