### Message from the Guest Editor

Cardiovascular disease is still the leading cause of morbidity and mortality worldwide despite the great diagnostic and therapeutic progress made in recent decades. Intervention using cardiovascular risk factors is seen as the best long-term solution to improve the outcome of these patients. Therefore, their identification and appropriate therapeutic approach are of the utmost importance. We invite you to share your knowledge and experience by contributing to this Special Issue. Original and review papers that address cardiovascular risk factors in all aspects, from cellular and molecular mechanisms, and pathophysiological links to problems of diagnosis, treatment, and monitoring, are welcome. We look forward to receiving your contributions.
