Message from the Collection Editors

Dear Colleagues,

Medical imaging techniques are of paramount value in clinical medicine and as research tools. The techniques are rapidly improving and new techniques are continuously implemented. Whereas every technique has advantages and shortcomings, imaging techniques are often complementary, and therefore, a current trend is the integration of different imaging techniques for hybrid imaging. Examples of such synergistic hybrid imaging is PET/CT, which is now more common than PET-only scans. Recently, hybrid PET/MRI scanners have also been introduced in clinical use. Moreover, developments for combining ultrasonography with other modalities are on their way. Integration of morphological and functional imaging seems to be especially useful. However, combinations of several functional modalities may add value and allow for better tissue characterization.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
