Message from the Guest Editors

When assessing professional or amateur athletes, sports cardiologists are often faced with the problem of differential diagnosis between physiological adaptation to intensive training and suspicion of heart disease. Both false positive and false negative findings may lead to detrimental consequences for the athletes. Recent studies have proposed several algorithms which are helpful in the cardiological assessment of athletes at screening and those with suspicion of a cardiac condition. However, there is limited knowledge on specific groups of athletes, including adolescents, women, veteran or late start athletes, athletes of different ethnical backgrounds or athletes with disabilities. There is also a paucity of prospective data on athletes with known cardiovascular conditions helpful in decision-making towards continued sports eligibility. Finally, diagnostic efficacy in sports cardiology may be improved by application of new imaging techniques, biomarkers, and other promising testing methods. All research related to the described area, including systematic reviews, original research or communications as well as case reports are highly welcomed.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
