New Perspectives on the Measurement of Free Light Chains in the Different Matrices: Serum, Urine, and Cerebrospinal Fluid

Guest Editor:

Dr. Massimo Pieri

Department of Experimental Medicine, University of Tor Vergata, 00133 Rome, Italy

Deadline for manuscript submissions: closed (30 April 2024)

Message from the Guest Editor

The determination of free light-chains (S-FLCs) in serum has been a turning point in the diagnosis, prognosis, and monitoring of monoclonal gammopathies of undetermined significance (MGUS), multiple myeloma (MM), and light-chain amyloidosis (AL). The method, established in the 2000s, quantifies serum-FLC using polyclonal antibodies to identify the presence and pattern of multiple myelomas in patients; meanwhile, the assays are nowadays more often based on monoclonal antibodies. Since the FLC are the isoforms, kappa (\mathbf{K}) and lambda (λ), of the light chains of immunoglobulins that circulate unbound in the serum, in order to facilitate the interpretation, the results of their quantities will be accompanied by a ratio. The calculated value of κ/λ free chains (FLC) relative to the reference intervals may indicate the presence of plasma cell dyscrasias in the patient, such as multiple myeloma or AL amyloidosis.

The Special Issue will also address the possible benefits of using the new generation FLC tests and new experimental approaches used in laboratories.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Message from the Editor-in-Chief

Diseases is an international, peer-reviewed, open access, multidisciplinary journal that focuses on the latest outstanding research concerning diseases and conditions. Research articles, reviews, and other contents are released on the Internet immediately after acceptance. This journal aims to cover international conferences and symposia as new targets.

Diseases is increasingly gaining acceptance and visibility within scholars, and after only a few years of life, Diseases is now also covering specific topics with dedicated special issues. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.8 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2023).
