### Message from the Guest Editor

Dear Colleagues,

Pulmonary arterial hypertension (PAH) is a rare but devastating disease that carries a terrible prognosis. Pathologically PAH is characterized by sustained vasoconstriction and progressive obliteration of small resistance pulmonary arteries. Current treatments target the sustained vasoconstriction but the prognosis remains poor. There is currently limited information on biomarkers that indicate a patient response to these therapies. There is also an unmet need to develop new treatments that specifically target the progressive vasculopathy in these patients.

This Special Issue will provide an Open Access opportunity to publish research work and review articles related to the novel biomarkers, new molecular insights and potential therapeutic targets.

Dr. Allan Lawrie

## Message from the Editor-in-Chief

*Diseases* is an international, peer-reviewed, open access, multidisciplinary journal that focuses on the latest outstanding research concerning diseases and conditions. Research articles, reviews, and other contents are released on the Internet immediately after acceptance. This journal aims to cover international conferences and symposia as new targets.

*Diseases* is increasingly gaining acceptance and visibility within scholars, and after only a few years of life, *Diseases* is now also covering specific topics with dedicated special issues. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Medicine, Research and Experimental)
