Biodiversity of Rotifers-2nd Edition

Message from the Guest Editors

Rotifera is an amazing Phylum containing more than 2000 valid species described up to date. They represent a taxonomic challenge in several ways, while the limited number of morphological traits along with the vast range of plasticity halts the identification of their true diversity. Molecular tools assist, to that end, in unraveling a great number of cryptic species in the Phylum. Combined in an integrative approach with morphology and ecology, they contribute to accurate species description, which is fundamental in order to explain patterns of biological diversity and biogeography, understand population genetic processes, detect ecological divergence, and ultimately assess the ways in which ecosystems function. Rotifers, due to their short generation time and their reproductive mode, show rapid local adaptations, making them useful indicators of environmental change. The patterns of rotifer diversity can identify disturbance in aquatic ecosystems and assist in trophic state and water quality assessment, while the rotifer community (both in terms of composition and seasonal succession) plays a very important role in ecosystem functioning.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q2
(Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.3 days after submission; acceptance to publication is undertaken in 4.4 days (median values for papers published in this journal in the second half of 2024).
