

Special Issue

Diversity, Ecology and Evolution of Odonata

Message from the Guest Editors

The order Odonata, dragonflies and damselflies, occurs practically throughout the entire planet, except the poles, currently representing about 6400 species distributed in 650 genera, with hundreds of species still to be described. Odonates are characterized by their extensive predatory habits and their important role in food chains in freshwater environments, and they are also considered excellent bioindicators of habitat quality. Despite having fewer species than other megadiverse groups, its position in the Pterygota phylogeny makes it a key group for understanding the evolution of insects. Therefore, and considering their ecological and evolutionary importance, we present this Special Issue focused on various aspects of the diversity of odonates. The scope includes but is not limited to the following fields: species diversity and distribution, community composition, biogeographic patterns, evolutionary history, genetic diversity, and population and community ecology. If you are interested in this opportunity or have any questions, please do not hesitate to contact us.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q1
(Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
