Message from the Guest Editors

Dear colleagues,

This Special Issue will focus on the psychological and social aspects of burn injuries. Emphasis will be placed on the role of these factors in the continuum of the rehabilitation process, from the acute phase of hospitalization through the long-term adjustment after discharge. Our goal is to further the understanding of psychological risk and resilience factors that contribute to burn survivors' quality of life and bring forward evidence-based intervention for the treatment of psychological consequences of burn injuries such as depression, anxiety, sleep disorders, and post-traumatic stress disorder. We welcome submissions related to psychological assessment, prevalence, and treatment of mood disorders, coping and adjustment, social support and adjustment, and innovations in treatment and use of technology in burn survivors. Experimental and research articles, up-to-date reviews, and commentaries are all welcome.

Dr. Sheera F. Lerman
