Message from the Collection Editors

Dear Colleagues,

This Special Issue aims to promote an interdisciplinary approach to the detection and attribution of climate change; the cross-fertilization between climate science, economics, and econometrics; and econometric estimates of climate impacts and policy evaluation. We solicit the submission of papers whose novelty stems from the development and introduction of new econometric models of climate change, and we invite papers using econometric methods to analyze climate data, as well as economic, financial, and econometric studies of climate impacts. We particularly welcome submissions in the field of climatology highlighting interesting statistical challenges to which econometric methods can contribute.

Keywords: econometrics; climate change; environmental, economic, and financial implications of climate change

Welcome for submission to this Special Issue, please click here to read more: **Here**.

Notes: There are no article processing charges (APCs) for publication in this Special Issue.
