Message from the Guest Editor

This Special Issue will build a base that will help policymakers to successfully implement a clean/renewable energy transition in their countries. Knowledge on this topic is currently dispersed in various sources and policymakers need to devote valuable resources to gather and systemize it. Thus, this Special Issue calls for studies that describe success stories in countries, regions, or sectors that have successfully set up renewable or clean energies and have overcome the various types of barriers (cost, institutional, environmental, personal, etc.). All types of contributions are acceptable, empirical studies are welcome too, but preferably this issue would welcome review papers that describe the state of the art in those countries. For example, do the relevant legislation, subsidies, and framework exist? What are the attitudes of citizens? How much fossil fuel endowment is there and how does this hinder renewable energy development? These are only some of the issues that would be welcome to discuss in the suggested reviews.
